TOKELO RAMOGASE

PROFILE

Hardworking student that stays fully committed to work and education, as well as other priorities, such as fitness. Stays extremely focused with assignments, tests and exams and is experienced with data analysis and data management at Belgium Campus ITversity in South Africa, as well as gaining more experience to data analytics at Cartrack in Rosebank, South Africa. Looking to build up my skills acquired during my work experience from my current internship at Cartrack, experience work in the IT industry to build foundational knowledge and skill.

Work Experience

Data Analyst Intern, Cartrack (Rosebank, South Africa) — 5 January 2026 to 31 December 2026

- Developed dashboards (bar gauges, pie charts, auto-refresh panels) on Grafana for the Fleet Bureau and Fleet Camera Bureau team, addressing a wallboard that only auto-refreshed briefly and often failed to surface new investigation cases - tracking streaming telematics, pending fitments and repairs, as well as new vehicle driver cases, including crashes or driver fatigue, as a result.

- Proposed and built a redesign of Python-generated reports (AI Camera Events, Upload Events) to automatically flag missing terminal event types per country, such as seatbelt and driver-fatigue detections – addressing a previous gap where identifying these issues required manually reviewing these reports line by line

- Built Python and SQL data pipelines in Jupyter Notebook against PostgreSQL databases to analyse contract, sales and customer data, including a master SQL customer view using Common Table Expressions (CTEs) to calculate lifetime value (LTV) and Revenue Per Vehicle (Average), for faster, more efficient customer profitability analysis.

- There were existing Python reporting scripts with distributed reports via email but were not proactive, and notebooks in GitLab/GitHub risked containing outdated employee addresses and scheduling errors. The scripts and notebooks were investigated, solutions were proposed and implemented to improve them, and repositories were audited for outdated data and scheduling accuracy

- There was a rising number of unassigned vehicles across Kenya, Mozambique and Uganda, and approximately 33 to 404 unassigned contracts, that needed root-cause investigation. Historical trends, component mappings, assignment records and contract/pricing metadata were reviewed to identify irregularities and correctly assign these vehicles to a group, such as back up units.

- Connected Databricks to the data analytics team's GitHub Repository, set up by manager as part of our team exploring the platform.

- Used an AI model (through the Ollama API) in Databricks to sort messy value added services into clear categories, then saved the cleaned results as tables.

- Built a dashboard showing services by category and country, using pie and bar charts and a summary table.

- Trained a machine learning model to predict which vehicles were at risk of failing, using practice data, and then tracked the results in MLflow.

- Researched and presented Data Build Tool (dbt) to the data team, building communication skills and knowledge-sharing skills.

- Assisted with Vehicle Identification Number (VIN) image annotation using Label Studio, to enable a computer to read VIN data without issues with blurry VIN images.

SCHOOL PROJECTS

Data warehousing

- Requirements Analyst - Produced a detailed requirements-gathering report based on summarized findings from data analysis.
- Strategy Support Analyst - encouraging key recommendations for strategic planning
- Support Desk Role - Answered several end user queries, regarding specific concerns of the end users, affirming the successful build of the data warehouse, especially clearly stated goals for this repository
- Data Analyst - Traced students' performance based on specifically identified user requirements of these detailed reports, developing a successful warehouse

Database Development

- Security Administrator - Implemented strong password inputs with a strong password to prevent unauthorized access
- Database Administrator - Monitored database performance and functionality, implementing modifications for improvement
- Data Entry - Captured details of clients for a school project known as Garden Waste Removal, by generating tables storing their name, surname, phone number etc.
- Database Developer - Produced a database composed of numerous collections and documents capturing data on many items from various categories in terms of purchase, including prices, quantity and item names.

EDUCATION

Belgium Campus ITversity
02/2023 – 12/2026
Coursework in Data Science (Currently in 4th year)

Modules done in 3rd Year:

- Data warehousing
- Database Development
- Database Administration
- Statistics
- Programming
- Mathematics
- Business Intelligence

Distinctions in 2nd Year:

- Database Development
- Data Warehousing
- Mathematics
- Innovation and Leadership
- Information Systems
- Internet of Things
- Programming 2
- Project Management

Distinctions in 1st Year:

- Mathematics
- Statistics
- Programming 1
- Computer Architecture
- Academic Writing
- Innovation and Leadership

British International College
01/2020 – 12/2022
Achieved Certificate of Merit for A2 Computer Science
Achieved Top Course Achiever in A Level of Computer Science
Achieved Certificate of Progress for A2 English 1st Language

- Cambridge Syllabus

SKILLS

Technical Skills

- SQL Databases
- Code debugging
- Data analysis
- Jupyter Notebook
- PostgreSQL
- pgAdmin
- Databricks
- Grafana
- Microsoft Excel
- Power BI
- MongoDB
- Microsoft 365
- SQL Server Management Studio
- R programming

Soft Skills

- Team Collaboration
- Resilience
- Independent Working
- Communication skills
- Time Management
- Attention to Detail
- Problem Solving
- Presentational skills
- Adaptability
- Daily Reporting/Progress Tracking
